Navjot Singh

Surrey, BC | +1 (604) 417-4647 | nsn8@sfu.ca | linkedin.com/in/navjot-s

EDUCATION

Simon Fraser University Burnaby, BC | Expected 2027

B.Sc. in Computer Science (In progress), CGPA: 3.76/4.33

SKILLS

Languages: Python; JavaScript; TypeScript; SQL; Java; C/C++

Tools & Integrations: REST APIs; Jira; Excel; Git / GitHub Actions; Docker

Data & Web Tech: Data Visualization Dashboards; PostgreSQL; React; Node.js; Data Analysis

Core Competencies: Automated Workflows, Cross-Platform Integration, Technical Project Management Support

EXPERIENCE

Software Developer (Co-op) | SKYTEC SUPPLY INC May 2026 – Aug 2026 | Surrey, BC

- Built and shipped Skytec Stockroom, a cross-platform inventory, rental dispatch, and rebar tonnage app for iOS, Android, and the web from one Expo codebase.
- Designed a three-tier role system (Admin, Yard Operations, Client Portal) with PostgreSQL row-level security and atomic RPC transactions across 32+ migrations.
- Automated workflows with serverless Edge Functions (JS/Python), Expo push, Resend email, and two-way QuickBooks Online inventory sync over OAuth 2.0.
- Owned Git-based collaboration and CI/CD for feature delivery across the co-op term.

Technology Specialist (Contract) | FRASER INTERNATIONAL COLLEGE May 2024 – Dec 2024 | Burnaby, BC

- Triaged and resolved software, hardware, and network tickets for students, faculty, and staff in Jira.
- Standardized reporting workflows in Excel and documented root-cause analysis for recurring issues.

TECHNICAL PROJECTS

Hyperspace | Data Visualization & API Integration Oct 2026

JavaScript, TypeScript, React, Cloud APIs

- StormHacks 2026 Hackathon Winner; built a hyperbolic knowledge map over 5,635 Wikipedia AI topics.
- Implemented hybrid vector and full-text search with interactive canvas visualization and Cloud API tooling.

Multithreaded MapReduce Engine Oct 2025 – Nov 2025

C/C++, Scripting, Data Analysis, Backend Workflows

- Parsed large datasets and coordinated concurrent map/reduce workers with shell scripts.
- Visualized thread latency across pipeline stages to diagnose bottlenecks.

DermaScan AI | Workflow Automation Mar 2025 – Apr 2025

Python, Docker, Automated Testing

- Built a computer-vision evaluation workflow for skin-image data with automated testing gates.
- Containerized the runtime with Docker for repeatable local and shared runs.

IoT & Embedded Systems Integration | Sensor Automation & Firmware Jan 2026

C, Python, Arduino Microcontrollers, Hardware Testing (Oscilloscope, Multimeter)

- Programmed low-level microcontrollers in C to process real-time sensor data and control output actuators.
- Built Python telemetry scripts to interface with microcontrollers for automated sensor data acquisition and logging.
- Conducted systematic hardware diagnostic testing using oscilloscopes and multimeters to debug signal integrity and communication protocols.
